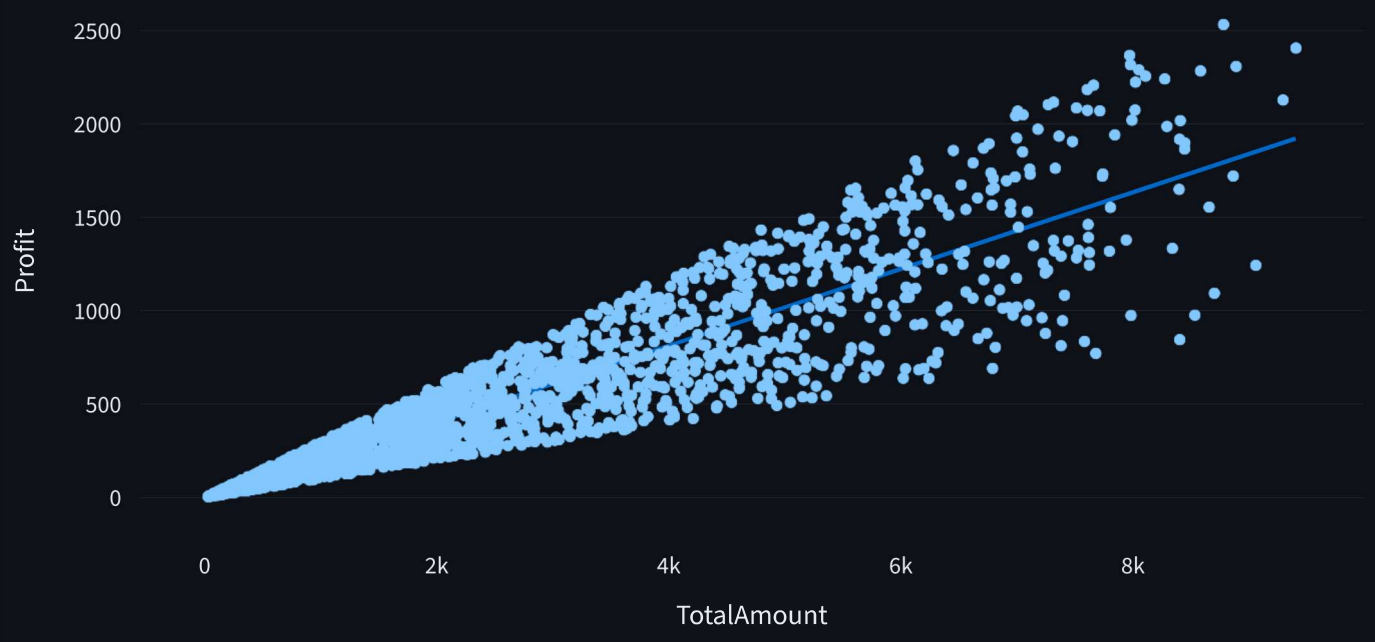
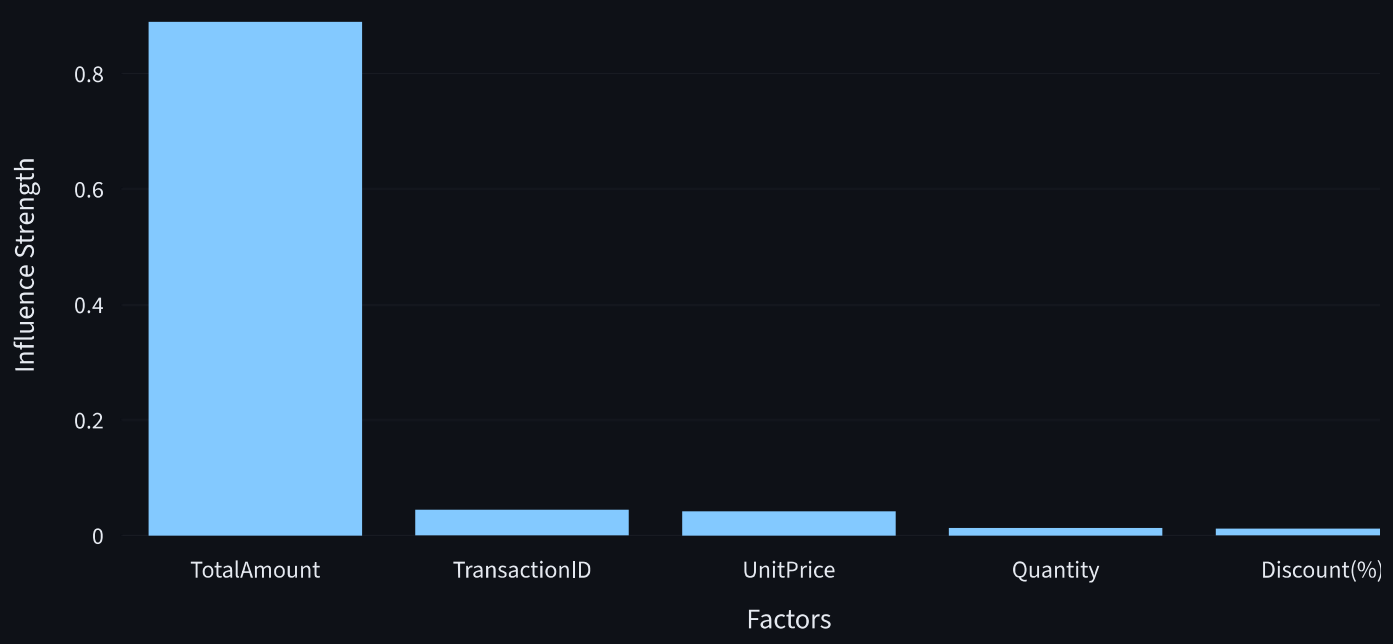
Visual Intelligence

Strong Relationship Between Key Metrics ($R^2 = 0.84$)



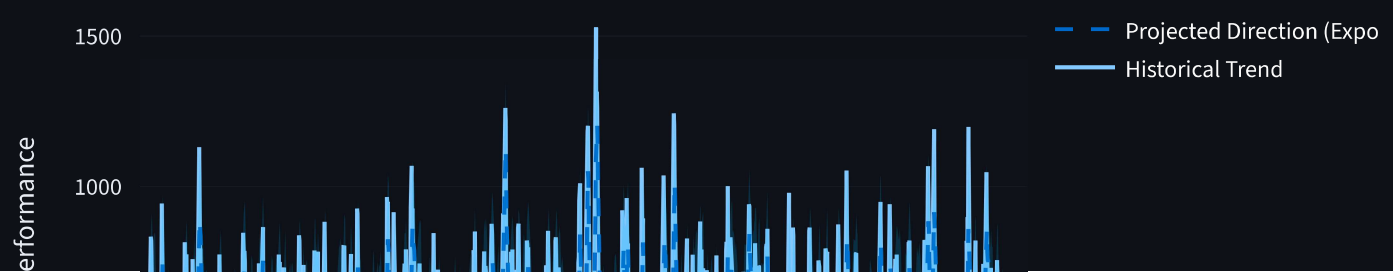
A direct comparison chart was selected because two metrics show a strong connection (correlation ≈ 0.92). This makes the relationship easier to interpret visually.

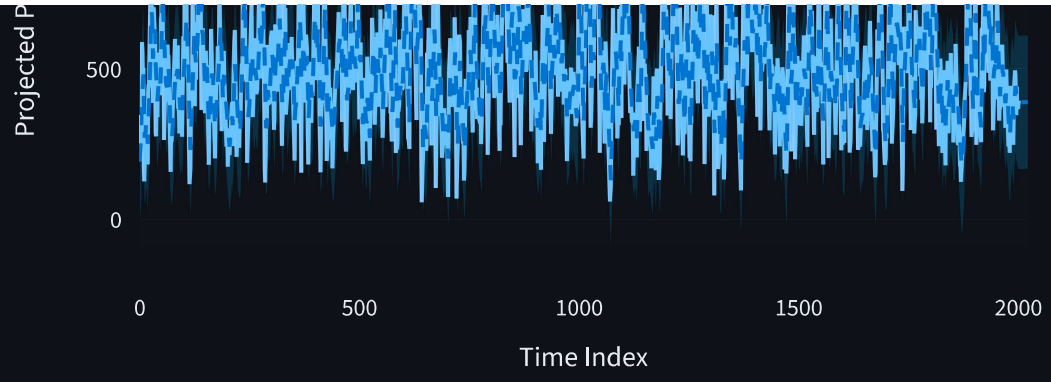
Key Influencing Factors (Selected: Random Forest)



This chart highlights which factor most influences performance. After comparing multiple analytical approaches, Random Forest was selected because it best captured the relationships within your data.

Advanced Forecasted Performance Projection





The projection indicates a upward movement of approximately 101.47%. The system selected Exponential Smoothing as the most stable forecasting approach. No strong cyclical structure detected.
