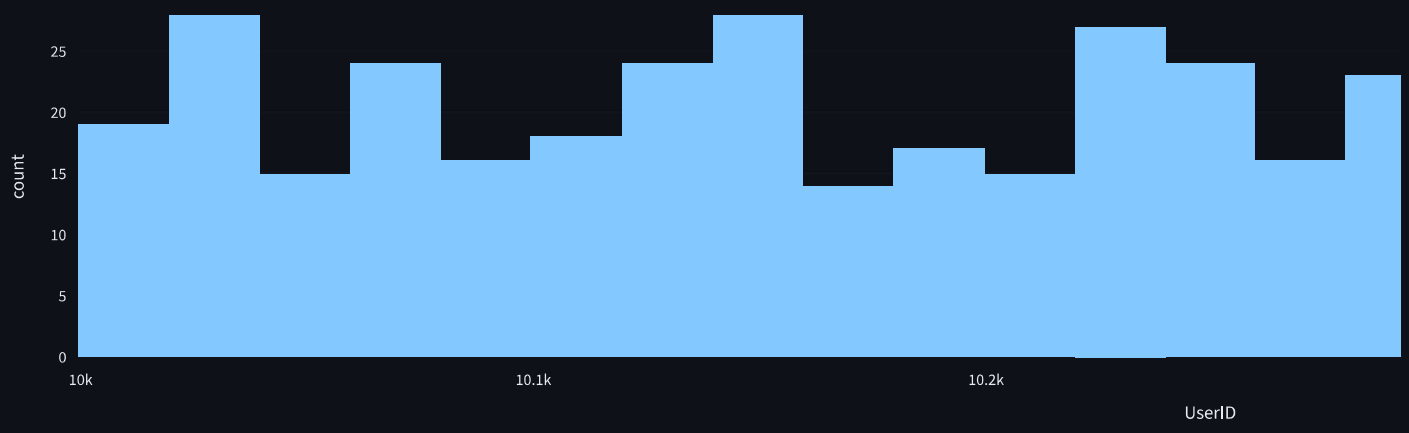
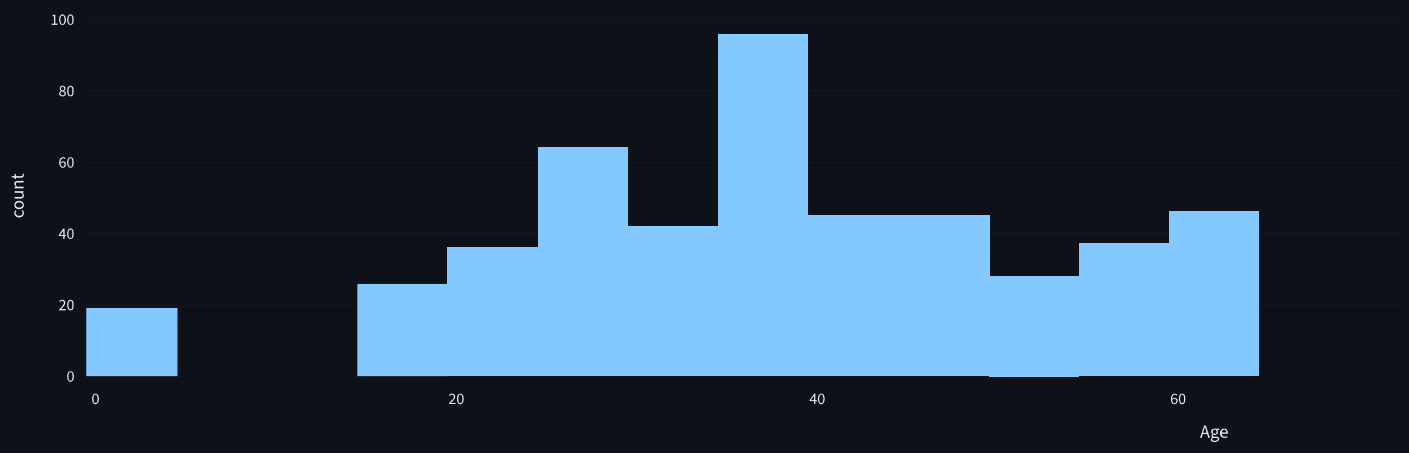
📊 Intelligent Analytical Engine

Distribution of UserID



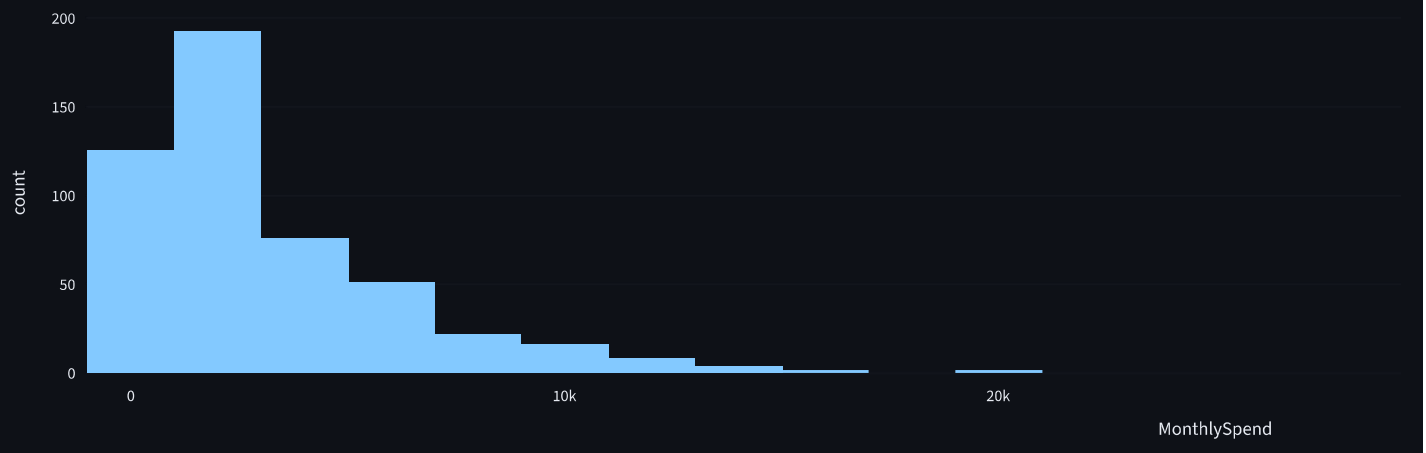
UserID appears relatively balanced with moderate variability (std ≈ 143.81).

Distribution of Age



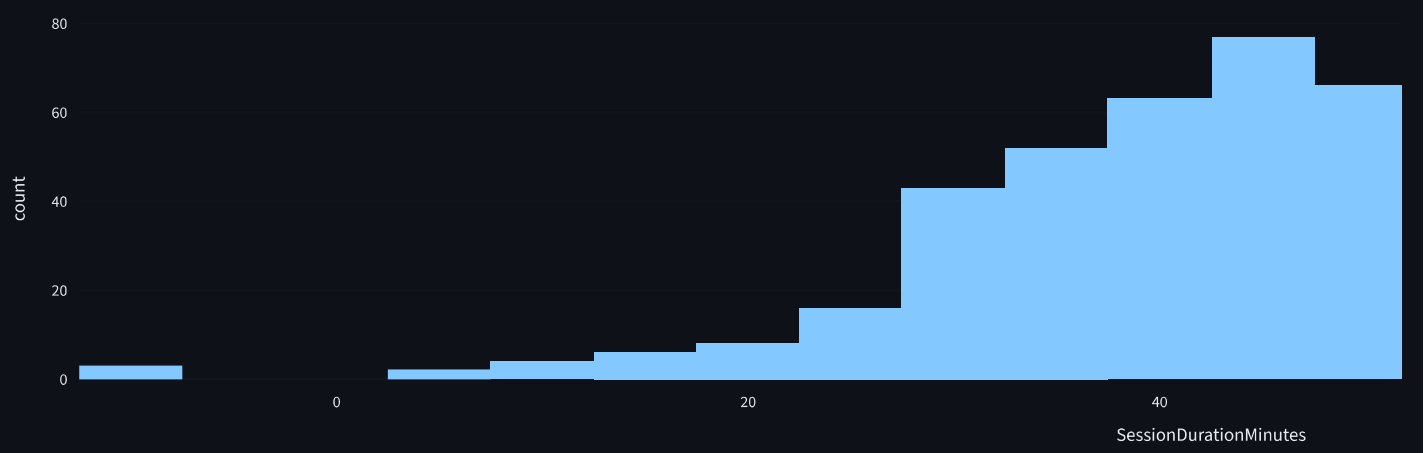
Age shows high asymmetry. Extreme observations may disproportionately influence averages.

Distribution of MonthlySpend



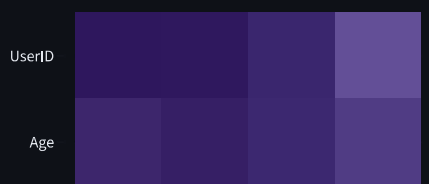
MonthlySpend shows high asymmetry. Extreme observations may disproportionately influence averages.

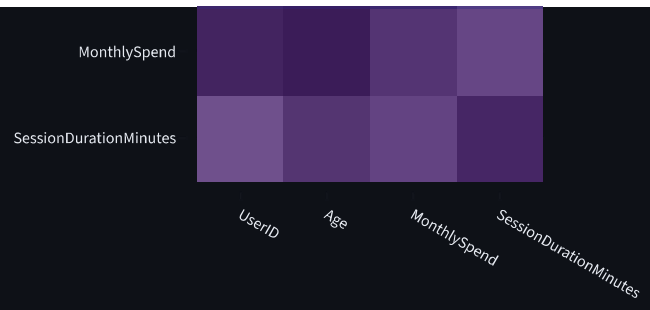
Distribution of SessionDurationMinutes



SessionDurationMinutes appears relatively balanced with moderate variability (std ≈ 14.42).

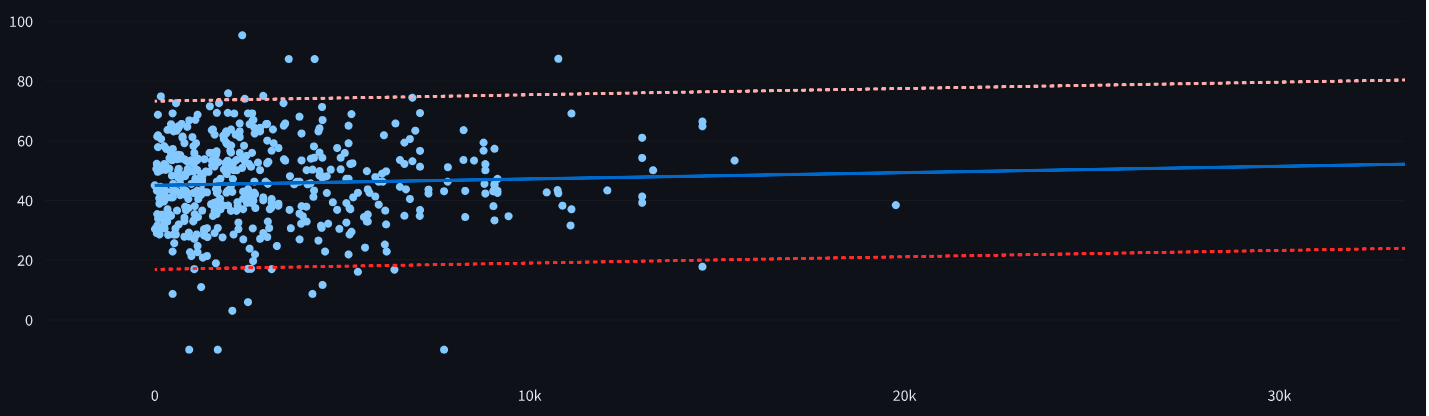
Feature Relationship Heatmap





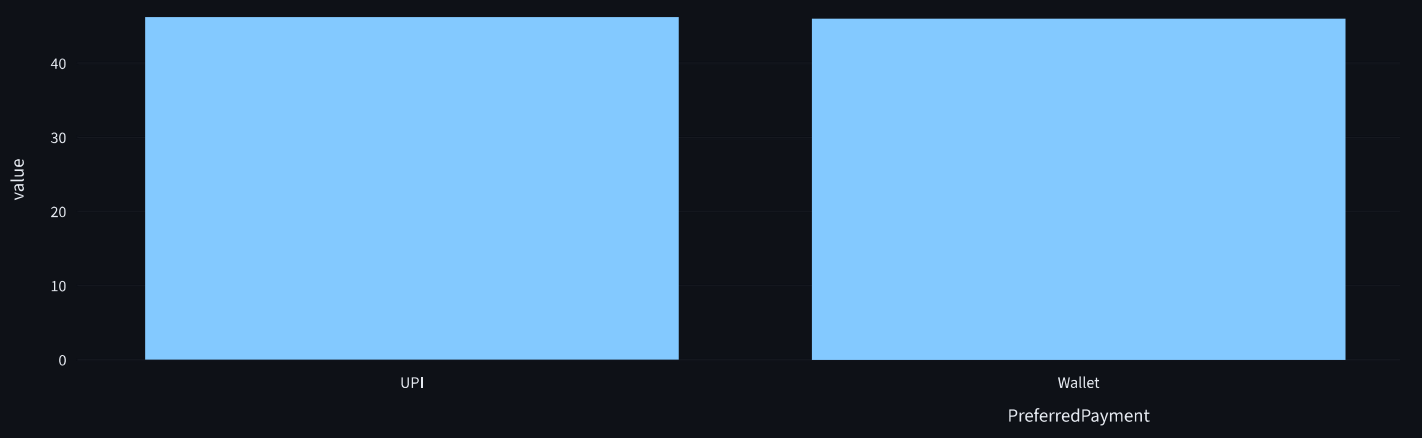
The heatmap highlights strength and direction of numerical relationships.

MonthlySpend vs SessionDurationMinutes Regression



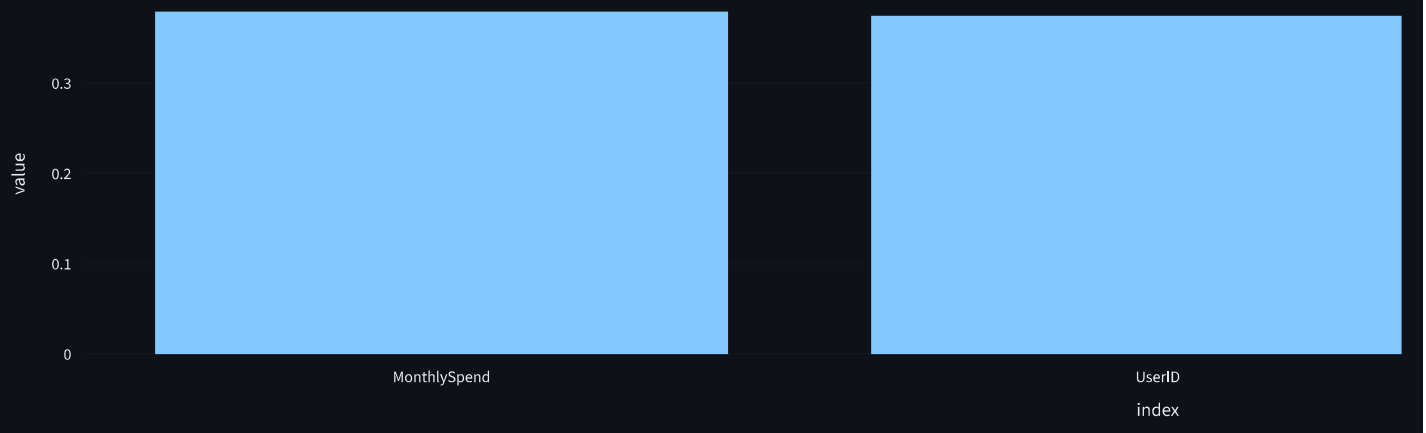
For every 1 unit increase in MonthlySpend, SessionDurationMinutes tends to increase by approximately 0.0 units. Model explanatory power ($R^2 \approx 0.004$).

PreferredPayment Influence on SessionDurationMinutes



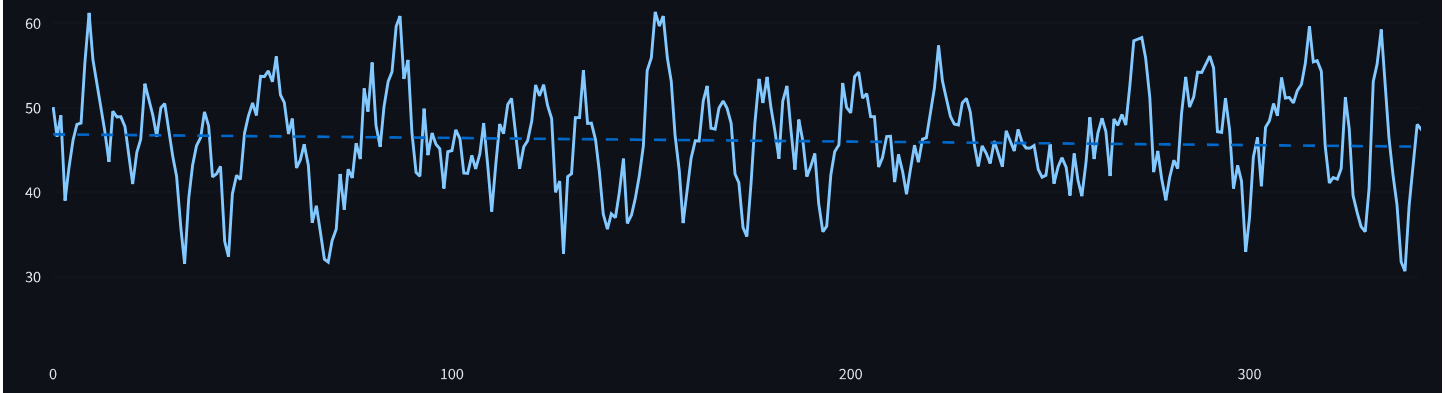
UPI category demonstrates strongest performance in SessionDurationMinutes, while Card lags behind. Segment-specific strategies may optimize results.

Key Influencing Drivers



MonthlySpend is the dominant driver of SessionDurationMinutes. Model reliability level: $R^2 \approx 0.821$.

Forecasted Trend for SessionDurationMinutes



Forecast suggests a decline trajectory of approximately -4.71% over the projected horizon.
