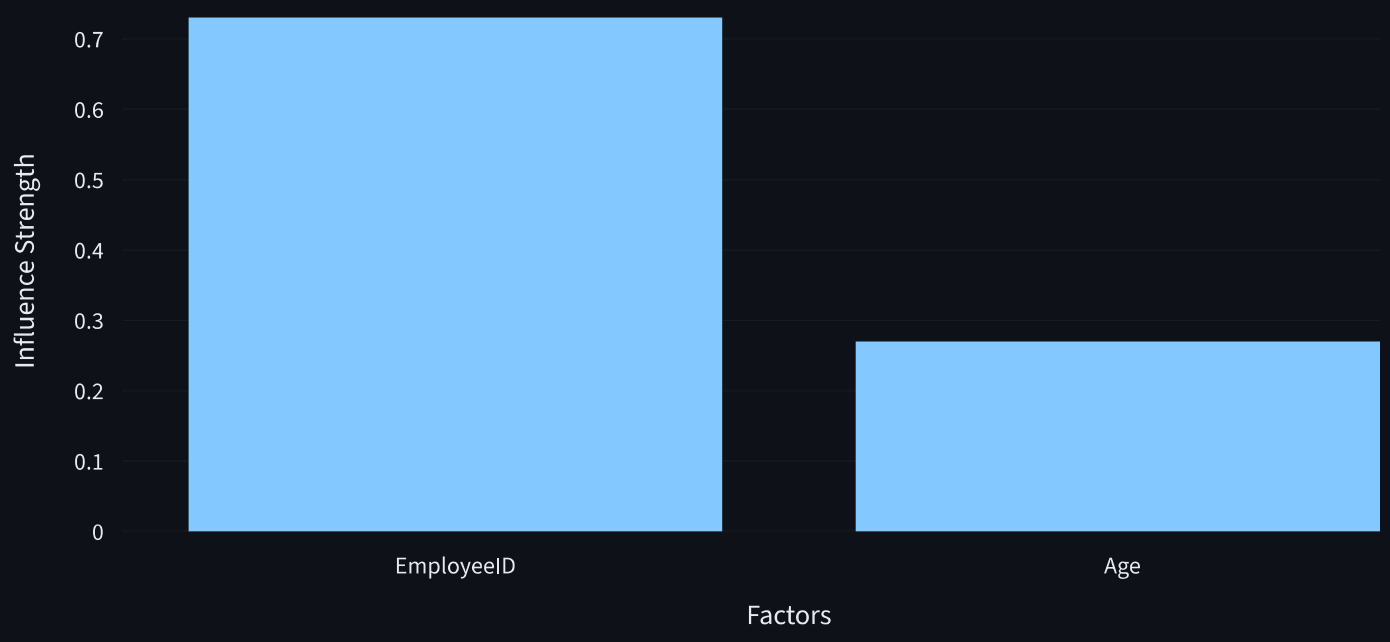
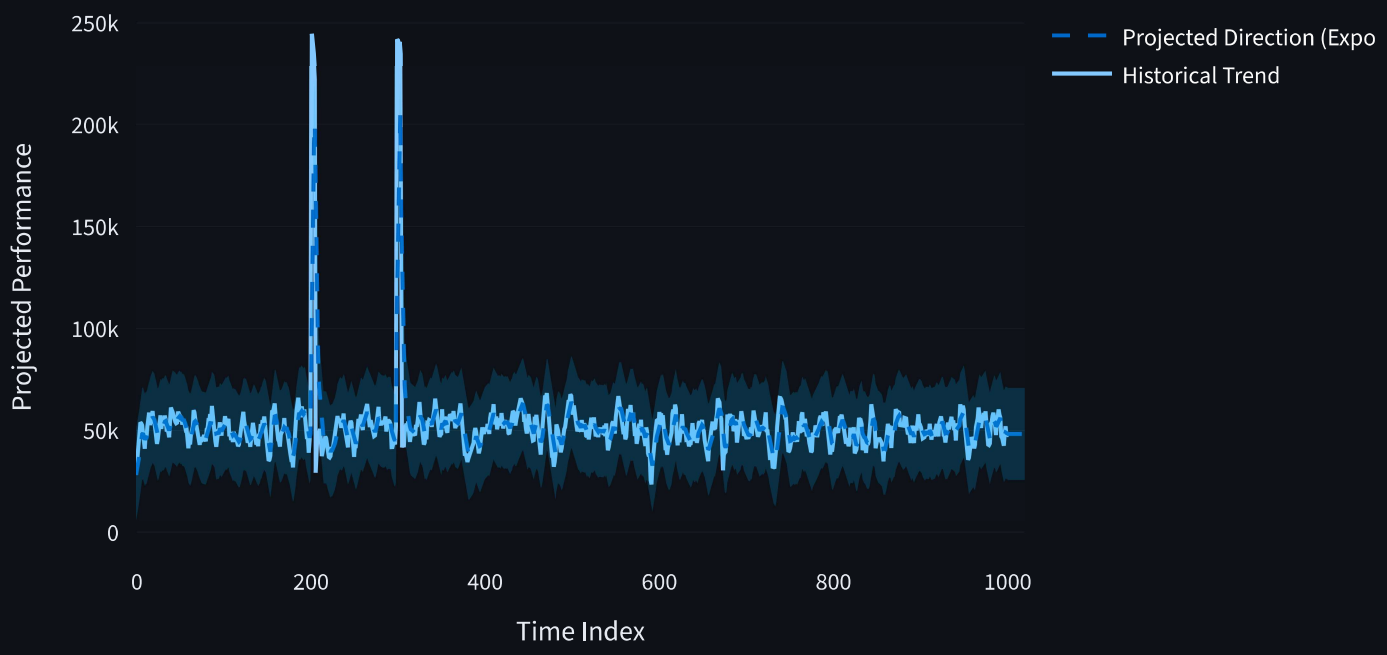
Key Influencing Factors (Selected: Random Forest)



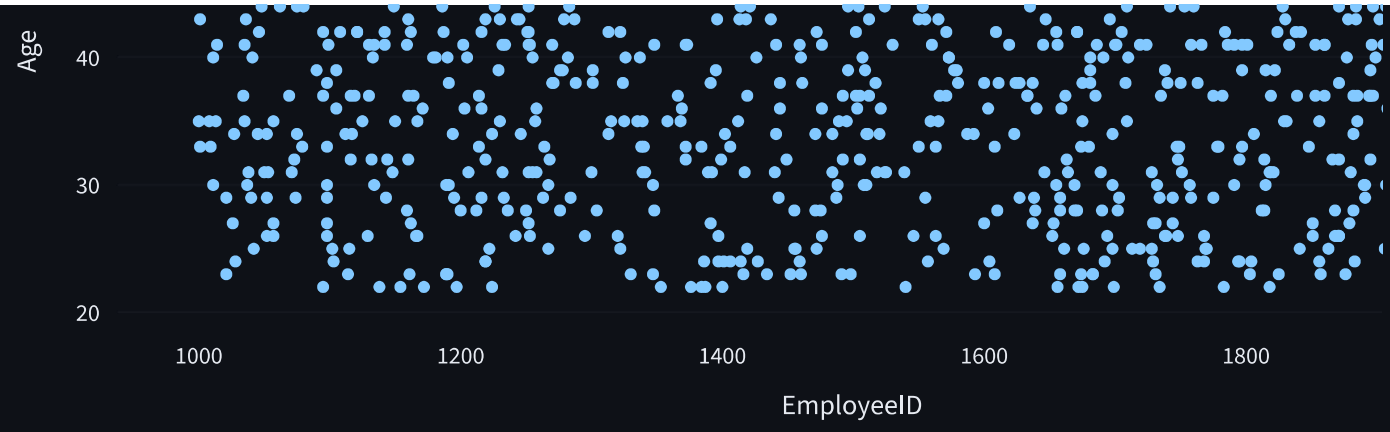
This chart highlights which factor most influences performance. After comparing multiple analytical approaches, Random Forest was selected because it best captured the relationships within your data.

Advanced Forecasted Performance Projection



The projection indicates a upward movement of approximately 70.73%. The system selected Exponential Smoothing as the most stable forecasting approach. No strong cyclical structure detected.

Nonlinear Relationship Detected



A nonlinear pattern appears between two variables, so a direct comparison view was chosen to better illustrate the shape of the relationship.
